REET JAISWAL

Mumbai, India | +91 9321908018 | reet.vj@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Final-year Computer Science student at VIT Chennai with hands-on experience building backend systems, full-stack applications, and automated deployment pipelines. Strong foundation in software engineering, AI-driven system architecture, information security, and modern GenAI technologies. Seeking a Software Engineer role to build reliable, scalable software within a collaborative engineering team.

SKILLS

Programming Languages:	Python, Java, C++, JavaScript, SQL, HTML, CSS
Frameworks & Libraries:	React, Next.js, Node.js, TypeScript, FastAPI, RBAC, JWT, OAuth
AI & Machine Learning:	LangChain, LangGraph, RAG, AI Agents, Scikit-learn, NumPy, TensorFlow, LLMs (Ollama, GPT)
Databases:	MySQL, PostgreSQL, Redis
Cloud & Tools:	Git, Docker, GitHub, CI/CD, GitHub Webhooks, AWS, Cursor
Information Security:	Burp Suite, Tenable Nessus, Oracle VirtualBox, Kali Linux, Lubuntu
Relevant Coursework:	DSA, Operating Systems, DBMS, Computer Networks, OOP, System Design, SDLC

WORK EXPERIENCE

Workflexi - *Software Developer (Freelance)* May 2026 - July 2026 *Remote • Mumbai*

- Built DevFlow, an AI-powered full-stack platform for API development, testing, deployment, monitoring, and team collaboration.
- Developed API workspaces featuring OpenAPI import, environment management, request history, and automated testing.
- Reduced deployment time by 10% through CI/CD pipelines, GitHub webhooks, Docker, and real-time build logs.
- Designed a secure multi-tenant architecture using JWT, OAuth, and RBAC for authentication and access control.

L&T Finance - *Information Security Intern* May 2025 - July 2025 *On-site • Mumbai*

- Conducted security assessments of web applications, identifying vulnerabilities such as Cross-Site Scripting, SQL Injection, Log4j and Apache Commons Text.
- Validated application security by deploying and evaluating Java applications on JBoss EAP 7.4 (Lubuntu) and Python applications in Docker.
- Executed application and network penetration testing using Burp Suite, Nessus, Kali Linux, and OWASP methodologies to uncover security weaknesses.
- Discovered 15+ vulnerabilities and delivered detailed technical reports with risk analysis and remediation recommendations to strengthen application and network security.

EDUCATION

Vellore Institute of Technology, Chennai Campus	*B.Tech in Computer Science (Specialization in Cyber Physical Systems)*	*2023 - 2027*	*CGPA: 8.37/10*
Bodhicariya Senior Secondary School, Kolkata	*CBSE - XII*	*2022*	*AISSCE: 86.6%*
New Horizon Scholars School, Thane	*CBSE - X*	*2020*	*AISSE: 96.2%*

PROJECTS

CodeDNA - VS Code Extension | *Github* *TypeScript, VS Code Extension API, Node.js, Vite, RAG, Vector DB, FastAPI*

- Built an AI-powered code intelligence extension that constructs context through dependency analysis, repository indexing, and semantic code navigation.
- Designed a hybrid retrieval pipeline combining AST parsing, graph relationships, and vector search to answer queries across 20K+ lines of code.
- Engineered an interactive IDE assistant using LLMs for code explanation, architecture insights, and context-aware assistance with low-latency retrieval.

MARIS - Multi-Agent Research Intelligence System | *Github* *Python, LangGraph, Ollama, ChromaDB, Docker*

- Architected a multi-agent research system with planner, researcher, verifier, and synthesizer agents for autonomous report generation.
- Orchestrated an agent workflow with task decomposition, iterative reasoning, web retrieval, and evidence validation.
- Implemented a persistent RAG pipeline, embeddings, and vector search to maintain context across research iterations and reduce hallucinations.

Hybrid Mammogram Classification System | *Github* *Python, Scikit-learn, Pandas, NumPy*

- Developed a predictive ML pipeline combining structured clinical data with image-based models for disease progression analysis.
- Processed and compared longitudinal patient reports to identify patterns associated with changes in predicted disease outcomes.
- Evaluated multiple modelling approaches including Random Forest, CNN, and Swin Transformer to compare predictive performance.

CERTIFICATIONS

Career Essentials in Generative AI by Microsoft
100 Days to Code Python by Udemy
Machine Learning Specialization by Stanford Online & DeepLearning.AI
AWS Cloud Practitioner Essentials

EXTRACURRICULAR

Ignition, VIT Chennai - Rocketry Special Team *Arduino, Raspberry Pi Pico, LoRa, ANSYS, SolidWorks*

Project Head | *Static Fire Tests 4 & 5*

- Led the development of a Raspberry Pi Pico-based data acquisition system integrating load cells, K-type thermocouples, and pressure sensors for real-time engine monitoring.
- Integrated LoRa telemetry for real-time data transmission during static fire tests and contributed to propellant formulation and testing.

Rocket Motor Development | *Static Fire Test 3*

- Designed motor casings and nozzles in SolidWorks and performed CFD analysis using ANSYS to evaluate thrust characteristics.
